Project Title

0 characters (200 max)

0 words (75 max)

### Award Category

Entries should consist of building projects that show a wide range of wood product applications and demonstrate an understanding of the special qualities of wood, such as strength, durability, beauty and cost-effectiveness.

A jury of prominent architects and engineers will review all entries based on various considerations such as creativity, appropriate use of wood materials in **satisfying** clients' building and site requirements and innovative design. Winners will be divided into the following categories:

Select one... \*

#### Award Category Descriptions

##### Commercial Wood Design

This category includes all commercial buildings using wood as a main structural feature. Examples include warehouses, offices, resorts and hotels and restaurants.

##### Institutional Wood Design

This category includes all institutional buildings using wood as a main structural feature. Examples include schools, libraries, firehalls, churches, hospitals and health facilities.

##### Interior Wood Design Showcase

This category includes projects using wood extensively within the interior (exposed structural elements) or as a non-structural feature of a non-residential or public space. Nominated projects should showcase the beauty and elegance of wood. Applications can include exposed structural finishes, flooring, and millwork.

##### Recreational Wood Design

This category includes buildings constructed for community use and can include buildings with public access using wood as a main structural component. Examples include community centres, public leisure facilities, transit stations and park pavilions.

##### Residential Wood Design

This category includes condominiums, mixed use commercial/residential apartments, senior housing complexes, homes, cabins, cottages and other living spaces using wood as a highlighted structural component.

## PROJECT DESCRIPTION & DATA

[Continue](#)

Complete the required information below.

### Project Title

Tiki Haus

8 characters (200 max)

2 words (75 max)

### General Project Description

Briefly describe the building program and why wood was used, how it contributed to the building solution, and how it solved problems. We recommend approximately 500 words, but you are free to provide more or less.

0 Words (500 max)

### Additional Description

A longer description of your submission may be provided here.

### Project Data

Building/Project Characteristics (if remodelled, identify new and existing portions. Also include brand names of main products used.)

- Structural
  - Frame
  - Floor and roof system
  - Interior Partitioning
- Exterior
  - Siding
  - Roofing
  - Windows/doors
- Interior
  - Walls, ceilings, floors
  - Millwork
  - Finishes

**Special Technical Considerations**

Building code and fire safety/insurance requirements

**Advocate Award**

This award will be presented to a firm, community or society that demonstrates a commitment to utilizing wood in an innovative structure of any building type. All projects using wood as a structural component will be considered for this award. Please include a description for the jury of why this project should be considered.
