Program Education Credit Information

Canadian Wood Council, Wood *WORKS!* and the Wood Solutions Fair is a Registered Provider with The American Institute of Architects Continuing Education System; the Architectural Institute of British Columbia and the Engineering Institute of Canada. Credit earned on completion of this program will be reported on behalf of members of each CES provider for those who complete a participation form at the registration counter. Certificates of Completion for non-AIA, AIBC or EIC members are available on request.

This program is registered with the AIA/CES for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product. Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

WHAT

Reciprocal Frame - “A structure made up of mutually supporting beams in a closed circuit”

*Reciprocal Frame
Architecture
Olga Popovic Larsen, 2008*

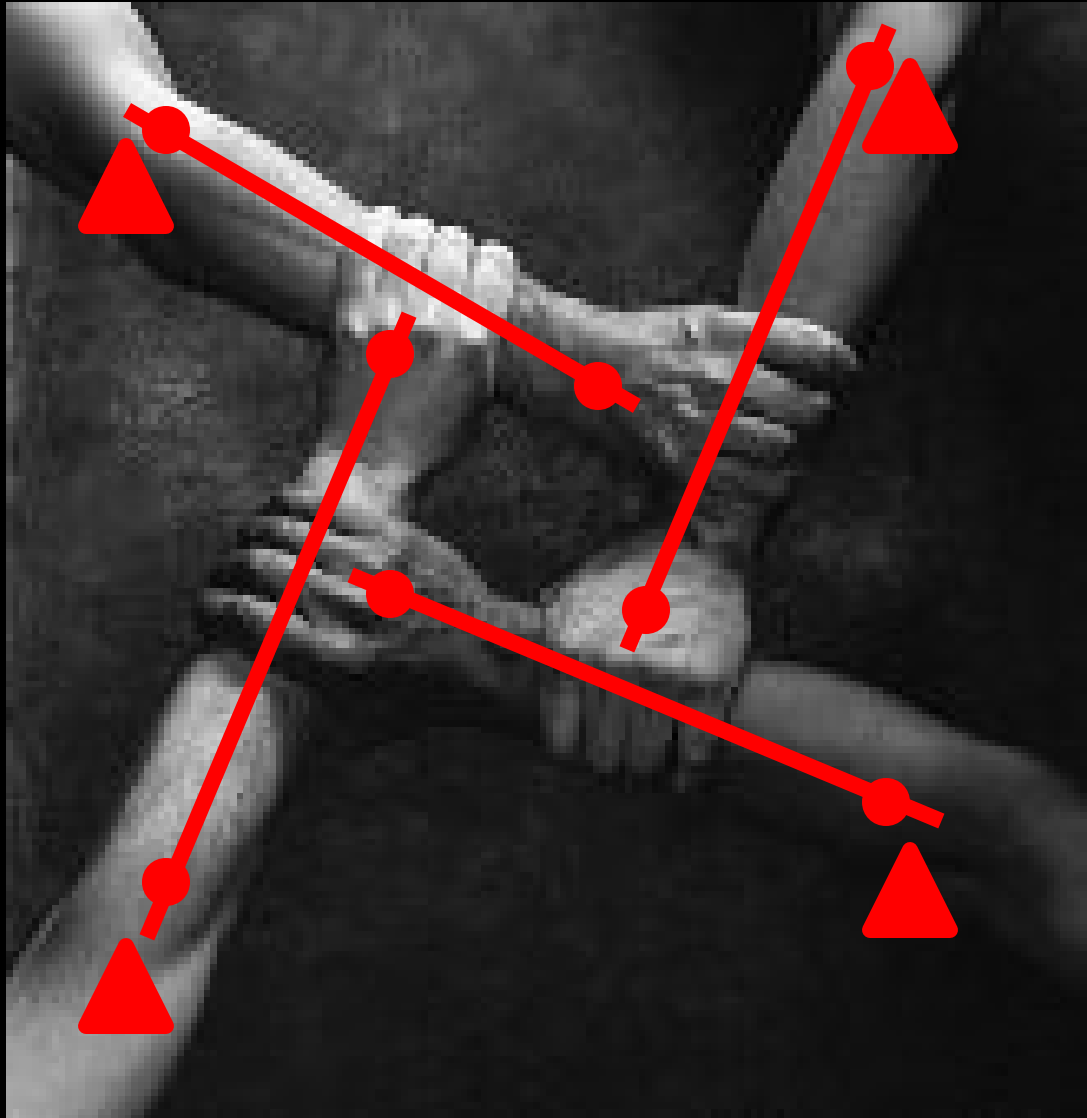

“He lifted himself by the seat of his pants
and I'll never forget the grim look on his face
as he hoisted himself and took leave of this place “

- *The Lorax*
Dr Suess, 1971

Reciprocal Frames

How it Works

100% of 1 Beam

100% of 1 Beam

100% of 1 Beam

100% of 1 Beam

- Span
- Geometric Complexity
- 2-Way Action
- Folly

Efficiency – The great Myth

Taught the answer is usually repetition, but is that true?

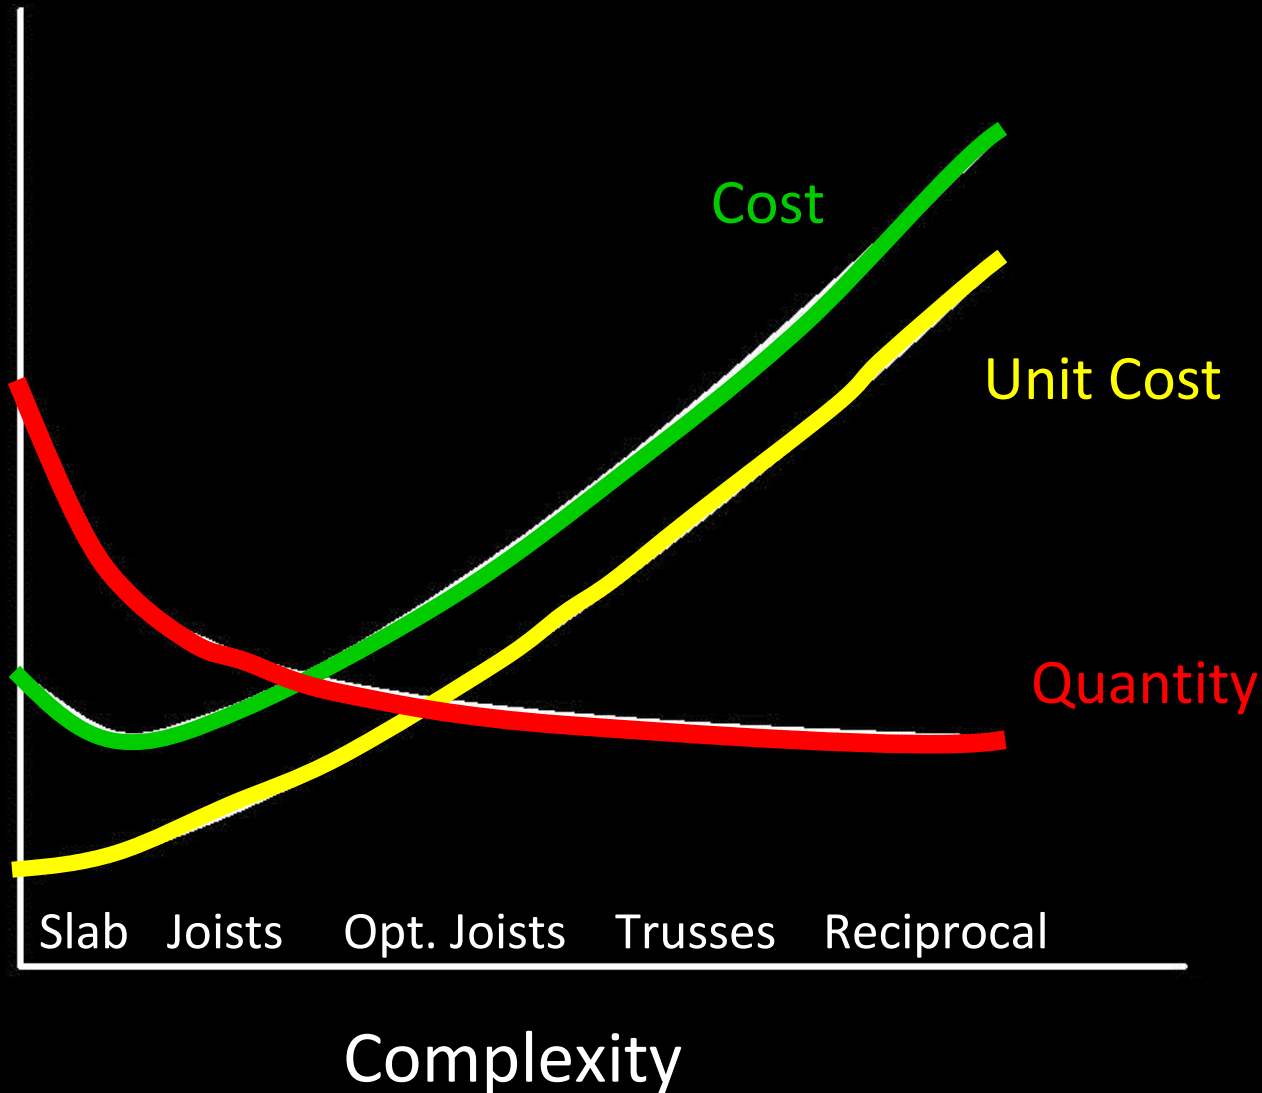

Repetition

Piece Count

Volume

More complex can be cheaper

Complexity Curve

Price vs. Cost

\$

“But Dave, we want an example of efficient, complex construction!”

SPAN

How do you use a 16' joist to span 20'?

REFORMULATION

When a problem is redefined to suit a preferred solution.

Friederich Zollinger 1880-1945

German Architect and Engineer

Lamella “Zollinger Roof”, Merseberg Germany 1920s

*Bild 4. Doppelhaus mit Zollbau-Lamellen-Dach im Bau (Gensac
Straße, Merseburg 1922)*

*Fig. 4 Semi-detached house with „Zollbau-Lamellen“ roof under
construction*

Hugo Häring 1882-1958

German Architect

Lamella - Gut Garkau, Germany 1923-1926

Fort York Armoury - Toronto
Built in 1935

“But Dave, why would we build reciprocal frames today? And how well do they work?”

Case Study 1

Simple Grid – Toronto
Architect - Top Secret
Blackwell Engineers

Objective

Shallow depth
Long spans
Stringent vibration criteria

Option 1 – Conventional Framing

Designed for Strength and Deflection

Piece Count – 5

Deepest Member – 494

Total Volume – 7.07 m³

265x494

Option 2 – Reciprocal Framing

Designed for Strength and Deflection

Piece Count – 10
Deepest Member – 456
Total Volume – 12.2 m³

265x456

Deflection

Do we take $L/360$ for granted?

Deflection

So what do we do instead?

Option 3 – Conventional Framing

Designed for Strength and Updated Deflection Criteria

Piece Count – 5
Deepest Member – 570
Total Volume – 8.16 m³

265x570

Summary
